The Greenest Alternative

When it comes to water storage, Aquastore tanks are your best choice for cost effective environmental “green” construction.

An Aquastore tank has many “green” advantages other tank designs cannot offer:

- Proprietary Vitrium™ glass-fused-to-steel technology is applied in a factory controlled clean environment to eliminate the release of VOC’s and fine particulates that can result from sandblasting and painting a tank in the field. And, it never needs to be repainted once installed.
- An Aquastore tank's efficient high strength steel design reduces energy consumption and emissions versus standard mild steel used for field welded tanks.
- Top-down construction minimizes footprint and disruption of adjacent landscape.

Built in 1980, and Has Never Needed Painting

LOCATION: City of Dennison, MN
 TANK TYPE: Aquastore Standpipe
 TANK SIZE: 20' Diameter x 52' High
 CONDITION: Excellent

“The tank works. It works and that’s it! Other than normal cleaning and inspections, no painting has ever been required for this tank.”

Paul Gillispie, Water Superintendent, City of Dennison, MN

In 1980 we made an innovative promise that our tanks would never need to be painted. No Aquastore® tank has been painted since – we are the authentic glass-fused-to-steel!
